Selection of NABL Accredited Lab for Quality testing of Linen & Water (Used especially in Dialysis Centers) Samples at Public Health Facilities

Background:

NABL accreditation ensures that the testing laboratory adheres to international standards and is competent to perform quality tests. As a move to ensure quality in service delivery at public health facilities, quality testing of linen & water (Used especially in Dialysis Centers) is proposed.

As Linens are being supplied by Private Agencies as part of "Nirmal Scheme", it is essential to check its quality as these are being used for patients in the public health facilities.

Similarly, management of Dialysis Centers is being outsourced. So, the NABL accredited labs can test the water quality used in dialysis centers which is crucial for ensuring patient safety during hemodialysis, as dialysis patients are exposed to large volumes of water.

Tasks: The selected lab will perform following tests & in given frequency as detailed below:

- **Linen**

- Recommended Tests- Tensile Strength, Steam Durability, Microbial Cleanliness and Biocompatibility as detailed out in **Annexure-1**.
- Frequency of Tests
 - The above tests shall be conducted for each batch of new linen supplied for use in public health facilities
 - Routine testing for microbial contamination at intervals of half-yearly after use
- **Sample size:**
 - **For New Supplies** – The Hospital Authority (DMO MS/ HM/ Suptd. CHC/ BPM) (or the authorized official selected by CDM & PHO) shall use random Sampling method to select linens from the stack. If the supply size is more than 3200 pcs, the sample size will be 100 pcs & if the supply size is less than 3200 pcs, then the sample size will be 63 pcs for new Linens. In case the supply size is 1000 pcs or less, in that case sample size shall be taken as 3% of the supply size. Further, out of the selected samples, the empaneled lab (authorized personnel) shall take 6 pcs linen (non-returnable) randomly for test. These procedures shall be repeated in each batch of supplies.
 - **For Used Linen after wash** -30 Pcs of Linen shall be picked from the laundry site (due care should be taken to select samples used at DHH, SDH, CHC/UCHC & critical care units) irrespective of number of Linens used in that district during that period. Further, out of the samples picked, the empaneled lab (authorized personnel) shall take 6 pcs of linen (non-returnable) randomly for tests, maintaining cold chain. The tests shall be conducted on quarterly basis

- **Water in use at Dialysis Centre** – As per Gol guidelines (Page-37), the water treatment system components are arranged and maintained so that bacterial & chemical contaminant level in the product water does not exceed the standards for homo-dialysis water quality.

Hence, Quarterly Sample shall be sent to the selected lab for testing (Parameters of tests proposed is at Annexure- 2).
